Exercise 3-11

a)   1 You can easily nest enumerate environments.

     2 The default enumeration labels can be changed easily if you don't like them.

Exercise 3-14

A) Like this

B) Notice how the item doesn't need brackets, but anything more than one line not in a bracket might be confusing

Exercise 3-21

1. Code syntax highlight example, commented out by default due to plugin installation requirements. See the minted documentation on https://github.com/gpoore/minted for install instructions. You're free to uncomment and try now, but it won't work without the correct python modules.

```cpp
1  #include <iostream>
2
3  using namespace std;
4
5  int main() {
6      cout << "Look how nice code looks in latex" << endl;
7  }
```

That's it for now

I don't expect anyone to use this example as there are a lot better example documents out there. This is more of an example of how assignments with this simple template could turn out.
